DAILY REPORT

jnpbali.com Website Development

Monday, August 17, 2026

1. Executive Summary

Today's work focused on improving the UI/UX of jnpbali.com for mobile, tablet, and desktop users — especially the custom apparel shopping flow. Tasks included text contrast fixes, product page layout, floating cart, wishlist integration, footer layout, checkout page, and account page fixes.

Child theme CSS iterations: v15 through v22. The floating cart was implemented as an MU-plugin via cPanel after several WordPress plugin activation attempts failed.

2. Completed Work

2.1 Global UI Fixes (ui-fixes.css v15–v21)

- Improved text readability on dark backgrounds (#E8E8E8 / #FFFFFF), including checkboxes and radio buttons (gold accent).
- Footer — Payment line no longer overlaps Email (removed CSS height:0 + ::before hack).
- Cleaned up paragraph and list layout in footer/pre-footer (label–value spacing, responsive grid).
- Register/account page (/account-access/) — removed white overlay; form labels are now readable.
- Mobile product page — Additional Information labels readable; duplicate cart icon hidden; mobile menu no longer covered by floating cart.
- Footer spacing optimized for mobile, tablet, and desktop (Section 9).

2.2 Desktop Product Page (≥1190px)

- Two-column layout for gallery + summary (e.g. JP Bali Mug).
- Fixed gallery appearing cropped and excessive empty space (~944px void removed).
- Mobile and tablet layouts unchanged (breakpoints preserved).

2.3 Floating Cart & Wishlist

- Floating cart positioned like the WhatsApp CTA (bottom-right corner).
- Add to cart and wishlist → items appear in cart (standard e-commerce behavior).
- Deployed as MU-plugin (wp-content/mu-plugins/) after ZIP plugin activation failed (duplicate versions).
- Cart popup: subtotal, Checkout button, and View full cart link.
- Toast notification when items are added.

2.4 Checkout & Cart Popup (ui-fixes.css v22)

- Checkout labels (Delivery Details, Hotel/Villa, etc.) — fixed white text on white forms to dark (#1a1a1a).
- Delivery helper text (.jnp-ch-intro, .jnp-ch-note) set to readable gray (#444).
- Cart popup — hidden duplicate WooCommerce theme footer; single subtotal + action buttons only.

3. Issues Found & Solutions

Issue	Root Cause	Solution
Checkout labels invisible	Global CSS forced light text on white forms	Checkout-specific override on body.woocommerce-checkout (v22)

Issue	Root Cause	Solution
View Cart button nearly invisible in popup	rgb(7,7,7) text on dark bg + duplicate theme footer	Hide .woocommerce-mini-cart__buttons from theme
Payment & Email overlapping on mobile footer	.jnp-payment-note used pseudo-element outside layout	Normal text flow + Section 9 spacing (v21)
Static cart icon bottom-left on product page	Template cart slot + z-index conflict	Hide .jnp-cart-slot; raise mobile menu z-index
Floating cart plugin failed to activate	Duplicate plugin folders on unzip	Deploy as MU-plugin via cPanel
WordPress critical error	Plugin conflict/require issue	Recovery + RECOVERY-CRITICAL-ERROR-ID.md documentation

4. Files Created / Modified

File	Description
moderno-child/ui-fixes.css	CSS fixes v15–v22 (latest: checkout + float cart)
moderno-child/functions-snippet.php	Enqueue ui-fixes.css v22.0.0
moderno-child/header-custom.css	Mobile menu z-index
moderno-child/header-custom.js	Toggle body.jnp-menu-open, Escape/outside click
UPLOAD-ke-mu-plugins-jnpbali-float-cart.php	Floating cart MU-plugin v1.0.5
DEPLOY.md / CPANEL-DEPLOY-ID.md	Deployment guides
RECOVERY-CRITICAL-ERROR-ID.md	Critical error recovery guide

5. Deployment Status

Component	Live Status	Notes
ui-fixes.css	v21.0.0 (live)	v22 ready locally — not yet deployed
Floating cart MU-plugin	Deployed via cPanel	Working on shop; popup active
header-custom.js/css	Needs verification	Upload if not already on server
SpeedyCache	Clear required	Mandatory after CSS upload

6. Testing

- Checkout page — labels still rgb(232,232,232) on live v21 (fixed in local v22).
- Float cart popup — duplicate subtotal/buttons confirmed; v22 fix verified via browser (display:none).
- Mobile footer — Email/Payment overlap fixed in v21.
- Desktop product page — layout and gallery spacing fixed iteratively (browser verified).

7. Next Steps / Pending

- Upload ui-fixes.css v22 + bump functions.php to 22.0.0 + clear SpeedyCache.
- Visual verification of checkout, cart popup, and footer on mobile after deploy.
- Confirm header-custom.js/css is uploaded on the server.
- End-to-end test: browse product → add to cart → checkout → payment method.

8. Notes

Website: https://jnpbali.com | Stack: WordPress + WooCommerce + moderno-child theme + Elementor. All CSS fixes load after theme/Elementor with enqueue priority 99.
